## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 10-20 are allowed.

### ***Reasons for Allowance***

2. The following is an examiner's statement of reasons for allowance: The primary reason for the allowance of claims 10-15,18 is the inclusion of the following limitation: 'updating the fault injection selection data and the fault injection values at the selected fault injection locations of the programmable circuit device, while the selected fault injection locations are controlled by the fault injection selection data in the first register and by the fault injection values in the second register instead of by system logic of the programmable circuit device'.

The primary reason for the allowance of claims 16,19 is the inclusion of the following limitations: 'injecting stuck-on fault injection values on selected first pins of the fault injection locations connected in a fault injection circuit between system logic of the programmable circuit device and the first pins, while the programmable circuit device is mounted on a circuit board, to test for vector routing verification of the circuit board; and injecting stuck-at fault injection values on selected second pins of the fault injection locations connected in a fault injection circuit between system logic of the programmable circuit device and the second pins, while the programmable circuit device is mounted on a circuit board, to test for vector routing verification of the circuit board'.

The primary reason for the allowance of claims 17,20 is the inclusion of the following limitations: 'injecting stuck-on fault injection values on selected first pins of the fault injection locations connected in a fault injection circuit between system logic of the programmable circuit device and the first pins, while the programmable circuit device is mounted on a circuit board being tested by verification test software, to test for verification of a new algorithm of the software; and injecting stuck-at fault injection values on selected second pins of the fault injection locations connected in a fault injection circuit between system logic of the programmable circuit device and the second pins, while the programmable circuit device is mounted on a circuit board being tested by verification test software, to test for verification of a new algorithm of the software'.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
